

Family Jewels

In the courtyard of the famous Palazzo Partanna, in the heart of Naples, Mantovano still continues its long tradition, creating unique jewellery and art objects.

The selection of top quality stones, the continue research of innovative technologies and materials are a must at Mantovano. Straight following a family tradition (it's the third generation of jewellery "artists"), every jewel is rigorously and exquisitely hand-wrought. The magnificent black and white diamond ring (in the picture) is composed by two white darkened gold flowers, each one set with a central round white diamonds and surrounded by a black and white diamond pavè.

LED Wallpaper

London based designers Meystyle are the creators and manufacturers of LED wallpaper with incorporated Swarovski crystals.

The LED's are fully integrated into the material of the wallpaper, allowing it to be pasted and hung just like any traditional wall covering – but with the added requirement of an electrical socket or a switch.

The low level lighting of the LED's adds an aesthetic quality as well as provides a spatial marker at night when all other lights are off. The use of Swarovski crystals accentuates the impact of the LED's as the two work in harmony to create a dramatic impact.

Semjase

Sandro Santantonio Design, 2010

Technology, design and poetry are the guide lines of this big floor lamp, designed to be an elegant piece of furniture. The shape of a bow, slender and fluid, offers a very wide lighting, thanks to the adjustable lighting head. From the base develops the hollow body of the lamp, getting to the head, that has the shape of a drop. Semjase is a perfect synthesis between a decorative and lighting-technical object. The mono-material structure is in coated rigid expanded polyurethane and is composed by 3 assembling elements. The finishing is glossy white coated. Semjase houses a halogen bulb and the light is directional, with dimensions: 44,7 x 196 x 202 cm.

ProfiloSmart

ProfiloSmart is a furnishing system for indoor and outdoor use, consisting of a modular track which can be equipped with various accessories held by special supports that can be adjusted horizontally and vertically. The track and the hooks are hidden by a cover and everything can be put together without the help of any tools or specialized personnel. All the main components of the standard version are made of anodized aluminium, available in various finishes and colours to match any accessory on the market or even new creations. The design of the covering can be modified according to the projects of architects and designers to be adapted to any style. The system is highly versatile and its characteristics make it suitable for hotels, indoor and outdoor public spaces, hospitals.
