Our Philosophy

The environment has to adapt to people's needs.

People with reduced mobility are all too well aware of the difficulties related to adapting to the environment. Starting with these considerations, we design and manufacture universal solution products pursuing a simple fundamental belief: it is the environment that has to adapt to people and not the other way around.

Beauty matters.

We believe that beauty and elegance create comfort.

Whether we look at healthcare facilities, hotels or private residences, beauty shouldn't be considered a minor factor only because we are dealing with functional needs.

We believe that beauty matters and helps people to be serene. That's why our products are designed to mix smooth functionality with spotless elegance.

Our Values

Future focused.

We understand that we will always be better if we are aiming towards something big, ambitious and inspiring...

...something that truly connects real products with work/life missions and not just short term needs. In other words, we design and make products that are useful and relevant now and in the future.

Utility and beauty.

We believe that artefacts can only be beautiful if they are well thought out and well designed.

Therefore useful design must also fulfill its intended function – building on sustainability so that design and materials are durable and not just a trend.

Inclusivity.

We support the rights of everyone to feel safe and independent in their environment, regardless of age or mobility.

Beautifully designed products with a universal input transform the everyday world into a safer, more flexible and more pleasing environment for everyone.

Dynamic mindset.

Readapting the bathroom environment creates many advantages.

We provide universal solutions that grow with the needs of the user. We are passionate, confident and focused on the future. We make a difference in people's lives and support and encourage a culture of innovation.

The smart system designed to make the bathroom environment flexible.

The core of Profilo Smart is our track and cover system. This simple, clever & universal solution affords flexibility throughout the bathroom.

Our track is an aluminium profile upon which you can attach, move, adjust and easily remove bathroom accessories.

Our unique system, has been built around 3 main features —

01. It is flexible.

Our accessories are easy to move and adjust: they adapt to the user's needs, allowing him or her to experience a superior level of comfort and autonomy.

02. It is modular.

Our products can be added or removed from the track within minutes, leaving the bathroom ready to adapt to different users, situations and needs.

03. It is customizable.

Our range of covers for the horizontal track have been designed to match every possible style of bathrooms. It is possible to choose from an endless number of colours, using inserts of every possible material and even using coatings to hide the track and completely merge it into the environment's aesthetics.

The flexible system designed to be integrated with the style of any environment.

Profilo Smart has designed different type of covers to offer the possibility to creatively insert its system in environments with different style.

The plain cover is offered with anodized, varnished or stainless steel finish and the same options are available for the cover for insert as well.

Besides, the cover for insert ensures the highest degree of freedom for architects and designers who will have the option to choose any type of material, texture or colour for the insert itself.

Cover for insert

01

Designed to be integrated.

- The possibility to add the insert allows you to match the system with colours and materials of any bathroom.
- It is possible to use any type of material for the insert or choose the highly customisable in-house option.
- It is possible to transfer on the insert any possible texture and reproduce the one on the wall.

02

Easy to clean.

03

Hides and protect.

- Hides the mechanism underneath and protects it from water.
- The Profilo Smart insert has been designed to pair with the related cover, in order to hide the system while matching the colour and style of bathroom environment.

04

Fully custom.

- The cover for insert is offered with with an anodized, varnished or stainless steel finish.
- The Profilo Smart inset can be customised with any colour or texture of choice.

In well-designed buildings, people smile more.

Health depends not only on the care we receive from our healthcare professionals, but also on the environments in which we live, work and play.

Research shows us that patients recover faster and workers are happier in places that are sensitively designed, offer opportunities to personalise and have a strong aesthetic viewpoint.

At Profilo Smart, all our products go beyond the functional to address that perfect balance between beauty and utility. Our elegant and versatile tracking system, unlimited colour palettes and beautiful accessories allow architects and designers to create stunning bathrooms that offer endless design possibilities for positive, supportive environments.

**Healthcare is changing.
For good.**

Traditionally, healthcare bathrooms have been designed for efficiency and they often take a 'one-size-fits-all' approach. But that doesn't offer patients and caregivers the ability to choose the right kind of environment for them. When they have choices, patients have a sense of control that helps them feel more empowered, engaged and less stressed. As this focus expands beyond treating illness, to include wellness and wellbeing, patients, their families and health professionals are actively participating throughout the continuum of care.

We work with leading healthcare organisations to create safe and efficient bathroom solutions that inspire greater connection, empathy and wellbeing for everyone involved in the experience of health.

**A partnership of
excellence.**

Village for all®, an innovative tourism company with 11 years of experience and an International network, has recognized a number of our products as guaranteed to provide Accessible Hospitality, without compromising on design, ensuring the guests needs are put first.

We design for architects

We support architects to create beautiful bathroom environments that enhance the wellbeing, empathy and connection of clinicians, patients and caregivers.

Flexibility is not a concept simply related to the functionality of Profilo Smart, but it also deals with its style. Our system not only adapts to the ever changing needs of the users, but it also adapts to the unique style of the individual architect, giving him or her the chance to match Profilo Smart with every possible design concept, thanks to the choice of an infinite palette of colours and materials.

Architects have the possibility to integrate the system into the style of the environment, make it stand out and emphasising the aesthetic qualities of aluminium or just making it disappear, merging Profilo Smart system into the bathroom environment.

We care about caregivers

Thanks to its intuitive ease of use and extreme simplicity, Profilo Smart represents the perfect ally for caregivers during their everyday mission to help users.

Nobody knows better than caregivers how important independence is for those who have a reduced mobility or how important it is to enhance the autonomy of the user for their self-esteem and recovery process. Profilo Smart's system has been designed specifically to remove some of the physical limitations that affect people in healthcare institutions and, in doing so, makes the caregiver's job easier and more effective.

Benefits for the facility manager

Versatile Environments.

Flexible environments are resourceful. There is no need to fully equip every single bathroom. What you need is having Profilo Smart's horizontal track in every bathroom and then you will be able to equip the accessories where they are needed. This way, instead of moving patients depending on their changing needs, you can just move the related accessories.

The possibility of easily fitting special equipment according to specific needs is what makes the environment versatile.

Different, Better.

Flexibility is something deeply embedded in our philosophy. We made our products flexible to help the users to enhance their independence. But we also apply the concept of flexibility to the design process to offer the chance to adapt the system to every possible bathroom style.

Thanks to these core beliefs, we are able to offer healthcare facilities management the possibility to differentiate their facilities from the competitors, significantly improving their offer and their design.

Benefits for the patient

A superior attention to patients.

We believe in patients' individuality. Each one has their own needs and everyone is different from the other one.

Different/Changing mobile capabilities

Different body characteristics

Thousands of different needs, especially in the bathroom

Profilo Smart's flexible system represents the perfect solution to address the needs of anyone, regardless of mobile capabilities and body characteristics.

PRODUCT FEATURES

An unparalleled hygiene standard.

At Profilo Smart we know how hard medical professionals work to ensure equipment safety and a clean environment. That is why we take this issue very seriously.

Profilo Smart decided to stand in the front line of prevention and has adopted innovative, cutting-edge solutions to prevent bacterial contamination.

Healthcare-associated infections (HAIs)

Diseases patients can contract while receiving medical treatment in a healthcare facility are a major, yet often preventable, threat to patient safety.

These specific types of cross-infections are determined by the transfer of harmful micro-organisms. Bacteria and viruses are among the most common cause of HAIs and the spread of these infections can occur between people, pieces of equipment, or within the body. Healthcare-associated infections can cause many unexpected and dangerous complications.

Anti-bacterial plastic varnishing

All the plastic components of our products are treated with an innovative varnishing that secures a superior hygiene standard, ensuring the material is anti-bacterial.

Easy to clean

All of our products has been designed using only neat surfaces that make them very smooth and easy to clean. This is a fundamental pre-requisite for a superior hygiene standard.

Anti-bacterial sitting cushion and backrest

Our shower seats are equipped with XL EXTRALIGHT® material. Soft, comfortable, flexible and anti-slip, it also ensures the highest standard of hygiene thanks to its anti-bacterial properties.

Flexibility

A flexible environment is a smart one:

It is versatile and can be adapted depending on the individual needs of each user. In addressing these needs, we created a system that balances the effect of reduced mobility, thanks to the ability to move accessories in different directions.

Our products can be:

Height and sideways adjustable

These products are designed to be attached on the horizontal track as well as on a vertical track, allowing them to be adjusted both horizontally and vertically. These features create the ideal solution for environments that will be used by a variety of different users who will have individual requirements.

Sideways adjustable

Many of our products are designed to be moved horizontally along the track, facilitating a versatile environment.

Fixed

We completed our product range with a series of fixed on the wall but foldable items that are ideal for stable users and for public areas.

Height adjustable

This range of products comes with a wall mounted vertical track that allows users or caregivers to adjust it vertically. It is the ideal solution for environments that have to address multiple users with a similar condition.

Removable

The wide range of items designed for the horizontal track can be easily removed when not in use. This feature brings a great versatility to the environment allowing the bathroom to completely adapt to different needs.

Select the Right Flexibility Type

Height & Sideways Adjustable.

- It guarantees the maximum level of flexibility and it is suitable for rooms with multiple users.
- It helps addressing several needs of several different people, that is why it is highly recommended for hospitals, nursing homes and clinics.
- The height and sideways adjustable products can be added and removed from the track in a few seconds. This unique features allows healthcare facilities to create versatile environments.

Height Adjustable.

- Elevated flexibility level.
- Indicated when it comes to address similar needs of different people (stable conditions).
- Indicated also for single users with changing needs.

Fixed.

- Indicated for single users with stable conditions.
- Recommended for public areas as an anti-theft and vandal-proof solution.

Our Product Lines

Smart.

Flexibility is the single most defining feature of Profilo Smart and its unique system. That is why we included every flexible item in the SMART line. Whether one of our products is height or sideways adjustable, it is SMART.

Classic.

We designed a range of wall mounted, fixed products, with a superior quality and an elegant, timeless design. We call this product line CLASSIC.

Accessories.

We included in this category all the accessories that are not purposely designed for the track.

Colours and finishes

Profilo Smart flexibility is not only about function. It's also about aesthetic.

Architects can enjoy the adaptability of our design. For the plastic components of our main products, we offer a range of 5 standard colours and the option to request a customised one (the minimum quantity order for customised colours is 100 pieces).

Additionally, it is also possible to choose between 2 aluminium finishes: anodized or similar stainless steel.

Our design also allows them to choose between matching the style of the environment or creating a contrast to help the elderly and people with visual impairment.

Aluminium surfaces are available with two finishes:

Plastic surfaces are available in five standard colours:

Adjustability

Whether it is the user or the caregiver or the person in charge of adjusting the height of our products, we created a solution for every necessity.

Manually adjustable

Simply lift the vertical lever lock, adjust the height and then close it again.

Our products are very easy to attach, adjust, move and remove without the necessity of special tools. The ease of use of our products is what ensures flexibility in the day-to-day operations of our system.

Zero-gravity

New feature!

Some of our washbasin brackets can be height adjusted with a zero-gravity system.

This is a gas-spring assisted mechanism that allows users or caregivers to adjust the height of a washbasin by simply lifting a finger. This is the ideal solution to ensure more autonomy for the user, while being very helpful for the caregiver who has to frequently adjust the product.

Soon
available

Electric adjustable

Some of our washbasin brackets and shower seats can be height adjusted electrically.

It is the ideal solution to ensure more autonomy and privacy for the user, but it is also very helpful when the caregiver has to frequently adjust the product.

A photograph of a woman with long dark hair, wearing a white shirt and dark trousers, leaning forward to assist a man in a wheelchair. The man is wearing a light blue t-shirt and is looking towards the right. The background is a plain, light-colored wall. A yellow rectangular box is overlaid on the image, containing the text "OUR PRODUCTS".

OUR PRODUCTS

TRACK & COVER

Profilo Smart's versatility not only encompasses functionality but also aesthetics. Our cover offers almost limitless design freedom and allows for infinite patterns, colours, inserts, finishes, designs, printing, etching, engraving and others.

Track & Cover

Profilo Smart's Track & Cover is what makes our system flexible. It enables the bathroom environment to adapt to anyone's need and offers an unprecedented level of comfort and safety.

The track has been designed to support a LED system and to allocate electricity cables in two different cable ducts (internal and external). Moreover, in order to make the alignment of the two sections of the track easier, we designed a cavity in which installers can insert a special guide-bar to make the operation quicker.

N.B. The maximum theoretical length for the track supply is 600 cm (please verify your shipping options), but in order to lower the shipping costs, we cut in half pieces longer than 230 cm. To ensure the proper functioning of the cover, we do not supply cover segments that are longer than 120 cm. If the track is divided by 2, the cover will be divided by 3 pcs, in this way the intersection between the 2 pcs. of track will remain covered.

E.g. If you order 300 cm of track and cover, you will receive 2 pcs. of track (150 cm) and 3 pcs. of cover segment (100 cm each).

Made in Italy		

A man with dark hair, wearing a light blue t-shirt and dark jeans, is seated in a blue metal wheelchair. He is looking off to the right with a slight smile. The wheelchair has large rear wheels and smaller front casters. He is in a bathroom setting, with a white toilet visible to his right. The wall behind him has dark grey tiles and a light blue horizontal band. A white grab bar is mounted on the wall. A yellow rectangular box is overlaid on the image, containing the text 'TOILET AREA'.

TOILET AREA

A woman with dark hair, wearing a white long-sleeved shirt and a black skirt, is leaning forward in a bathroom. She is holding a grey, foldable arm support that is attached to a white toilet. The background features dark grey wall tiles and a light blue horizontal band. The floor is made of light grey tiles.

Arm Support

Our range of arm supports are ergonomically shaped and foldable.

They have an aluminium structure with internal components made of stainless steel and nylon; their support areas are in lacquered thermoplastic with a non-slip, warm touch and scratch-proof finish. All the plastic components are anti-bacterial for a superior hygienic standard.

Wall mounted lift-up arm support

This product is ideal for users with similar, stable conditions and it is particularly suited for public areas. The support areas are treated with an innovative anti-bacterial varnishing. Available with an anodized or similar stainless steel; also available in the following dimensions: 60 cm, 75 cm, 90 cm.

A person wearing a white long-sleeved shirt is cleaning a shower area. They are holding a yellow spray bottle and spraying it onto a white rectangular shelf or ledge. The shower walls are covered in dark, textured tiles. The floor is made of light-colored tiles. A yellow rectangular box is overlaid on the image, containing the text "SHOWER AREA".

SHOWER AREA

Shower Seat

Our range of shower seats has an aluminium structure with internal components comprised of stainless steel and nylon.

The arm support areas are made of lacquered thermoplastic with a non-slip, warm touch and scratch-proof finish.

The backrest and the sitting cushions (easy to remove for cleanings or replacement) are made of XL EXTRALIGHT®, which means they are light, flexible, comfortable and anti-bacterial.

Wall mounted shower seat

Foldable shower seat are designed for our line of fixed, wall mounted products. This seat is ideal for users with similar, stable conditions and it is particularly suited for public areas. It is a comfortable and highly hygienic product: the sitting cushion (XL EXTRALIGHT®) results to be light, flexible and antibacterial. Available in 5 colours and 2 finishes.

A person with dark hair, wearing a light blue t-shirt, is seated in a blue metal wheelchair. The wheelchair has large rear wheels with silver spokes and black tires, and smaller front wheels. The person is positioned in front of a wall with dark, rectangular tiles. A white sink is partially visible on the left side of the frame. A yellow rectangular box is overlaid on the image, containing the text 'WASHBASIN AREA'.

WASHBASIN AREA

Washbasin brackets

Our range of brackets are designed to help the user to adjust the height of the washbasin in order to address different needs. No tools are required for any adjustment which is a great advantage for both users and caregivers.

Our washbasin brackets have an aluminium structure with internal components comprised of stainless steel and nylon; they are height adjustable with a 29 cm excursion and are equipped with a quick blocking system for additional safety.

The horizontal plaque comes without fixing holes and it is available in 3 standard sizes (60 cm, 90 cm, 100 cm) or in a custom size.

Wall mounted washbasin bracket

Washbasins

Our range of ergonomic washbasins in white Solid Surface is designed to be fixed on the special adjustable bracket or to be wall mounted. It is the ideal solution for addressing the needs of wheelchair users. The ergonomic washbasins have a slim and light structure, the lack of seams and cracks of the Solid Surface inhibits the growth of germs and bacteria, all of which make the product even more durable. It is non-porous, hence stain resistant and extremely easy to clean.

Ergonomic washbasin, 60 cm – Solid surface

On the frontal side of this ergonomic washbasin, an embedded grab bar helps the user to reach the area without effort and a small water collector has been designed to avoid water spillage during shaving or brushing of teeth.

Available in 2 models, with or without overflow hole.

Item code	Type
42-201-00	with overflow hole
42-202-00	without overflow hole

Ergonomic washbasin, 90 cm – Solid surface

On the frontal side of this ergonomic washbasin, an embedded grab bar helps the user to reach the area without effort and a small water collector has been designed to avoid the water spillage during shaving or brushing. On both lateral sides is located a handy towel holder.

It comes in 2 models, with or without overflow hole.
